Using social network analysis for collaborative design in a NIC

Shelah Feldstein

Network Director, Central Valley Networked Improvement Communities

David Sherer

Networked Improvement Science Fellow, Carnegie Foundation for the Advancement of Teaching

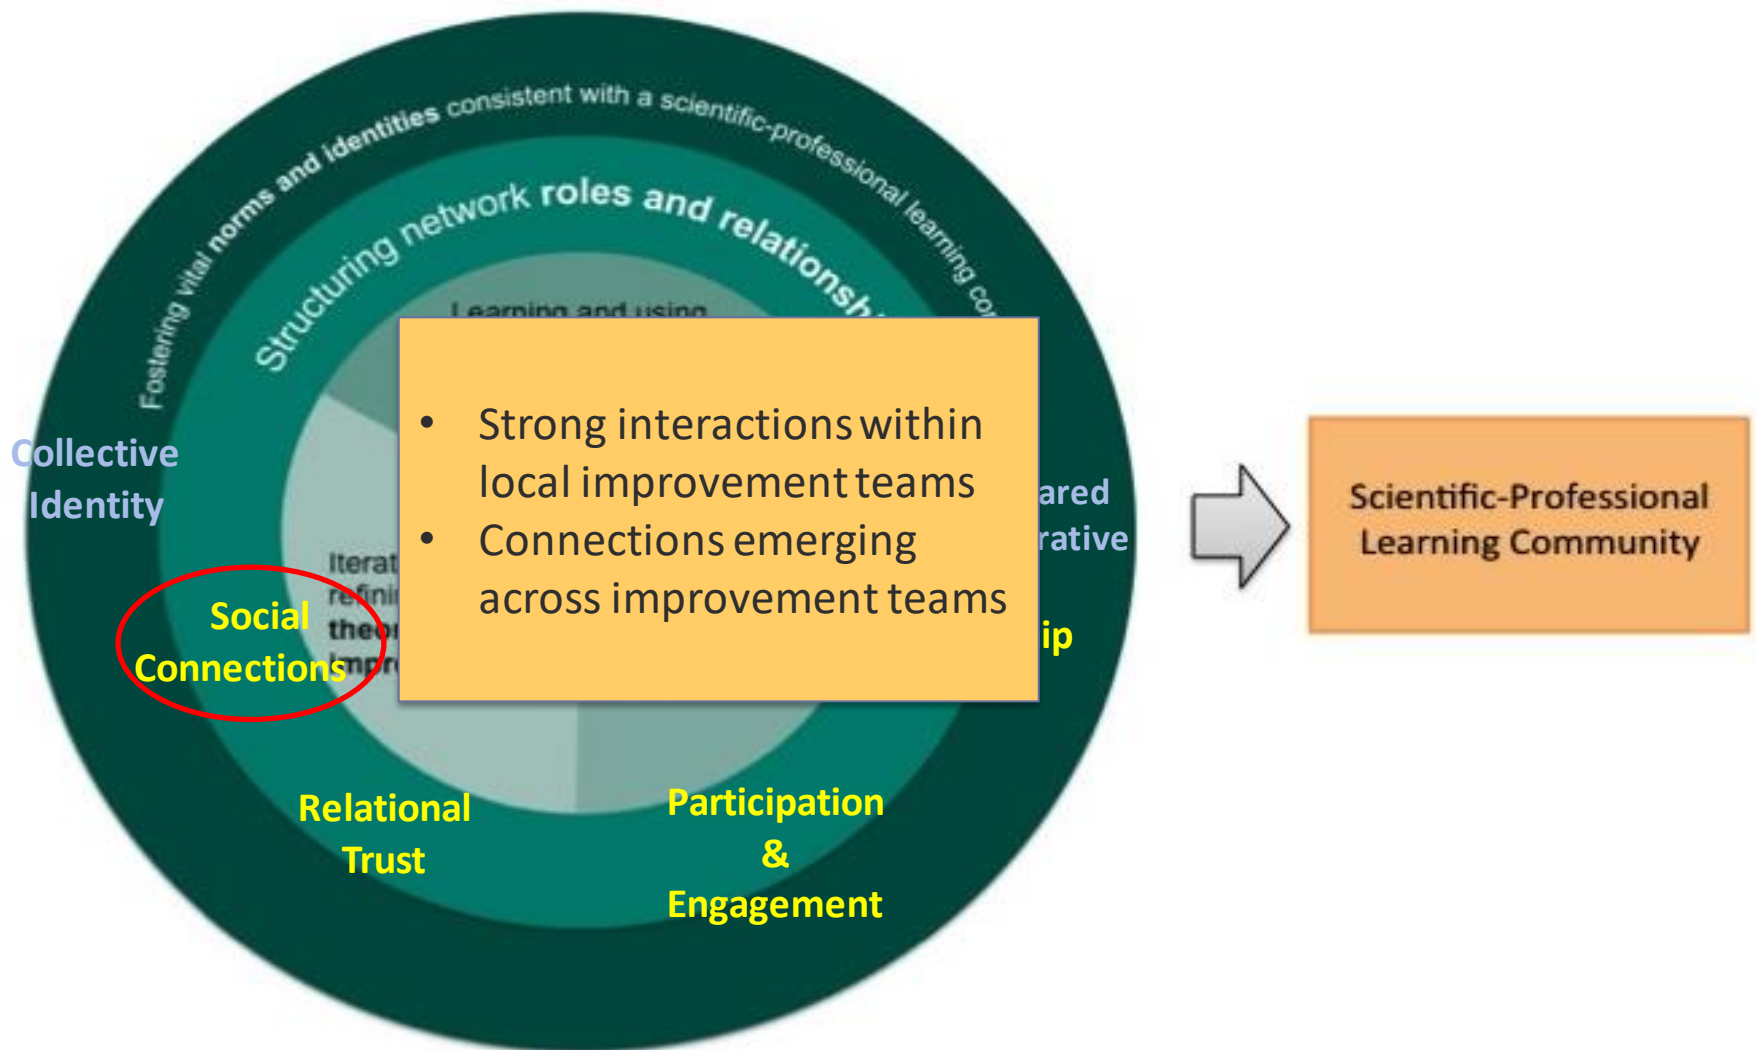

Background

- The social network perspective tells us that:
 - important things flow through network ties
 - The structure of a network matters
- Networked Improvement Communities (NICs) are fundamentally about bringing people together in new ways.
- Thus, social network analysis (SNA) may be a particularly good fit for NICs.
- But how can leaders use SNA to inform the design of their organizations?

Using SNA to inform collaborative design

- SNA can be used for identifying:
 - Unsung heroes
 - Bottlenecks
 - Problematic silos (Cross & Parker, 2004)
- SNA helps us **target** our efforts at fostering collaboration.
- How might SNA be used to guide design decisions in a NIC?

NIC Development Framework

Central Valley Network Improvement Communities

Tulare County
Office of Education

Jim Vidak, County Superintendent of Schools

8 SCHOOL DISTRICTS 15 SCHOOLS

1091 Students

41 teachers

33% English Learners

75.2% Socioeconomically Disadvantaged

AIM

Improve 5th grade math proficiency from 17% to 51% in CVNIC by 2019

Classroom Culture & Mindset

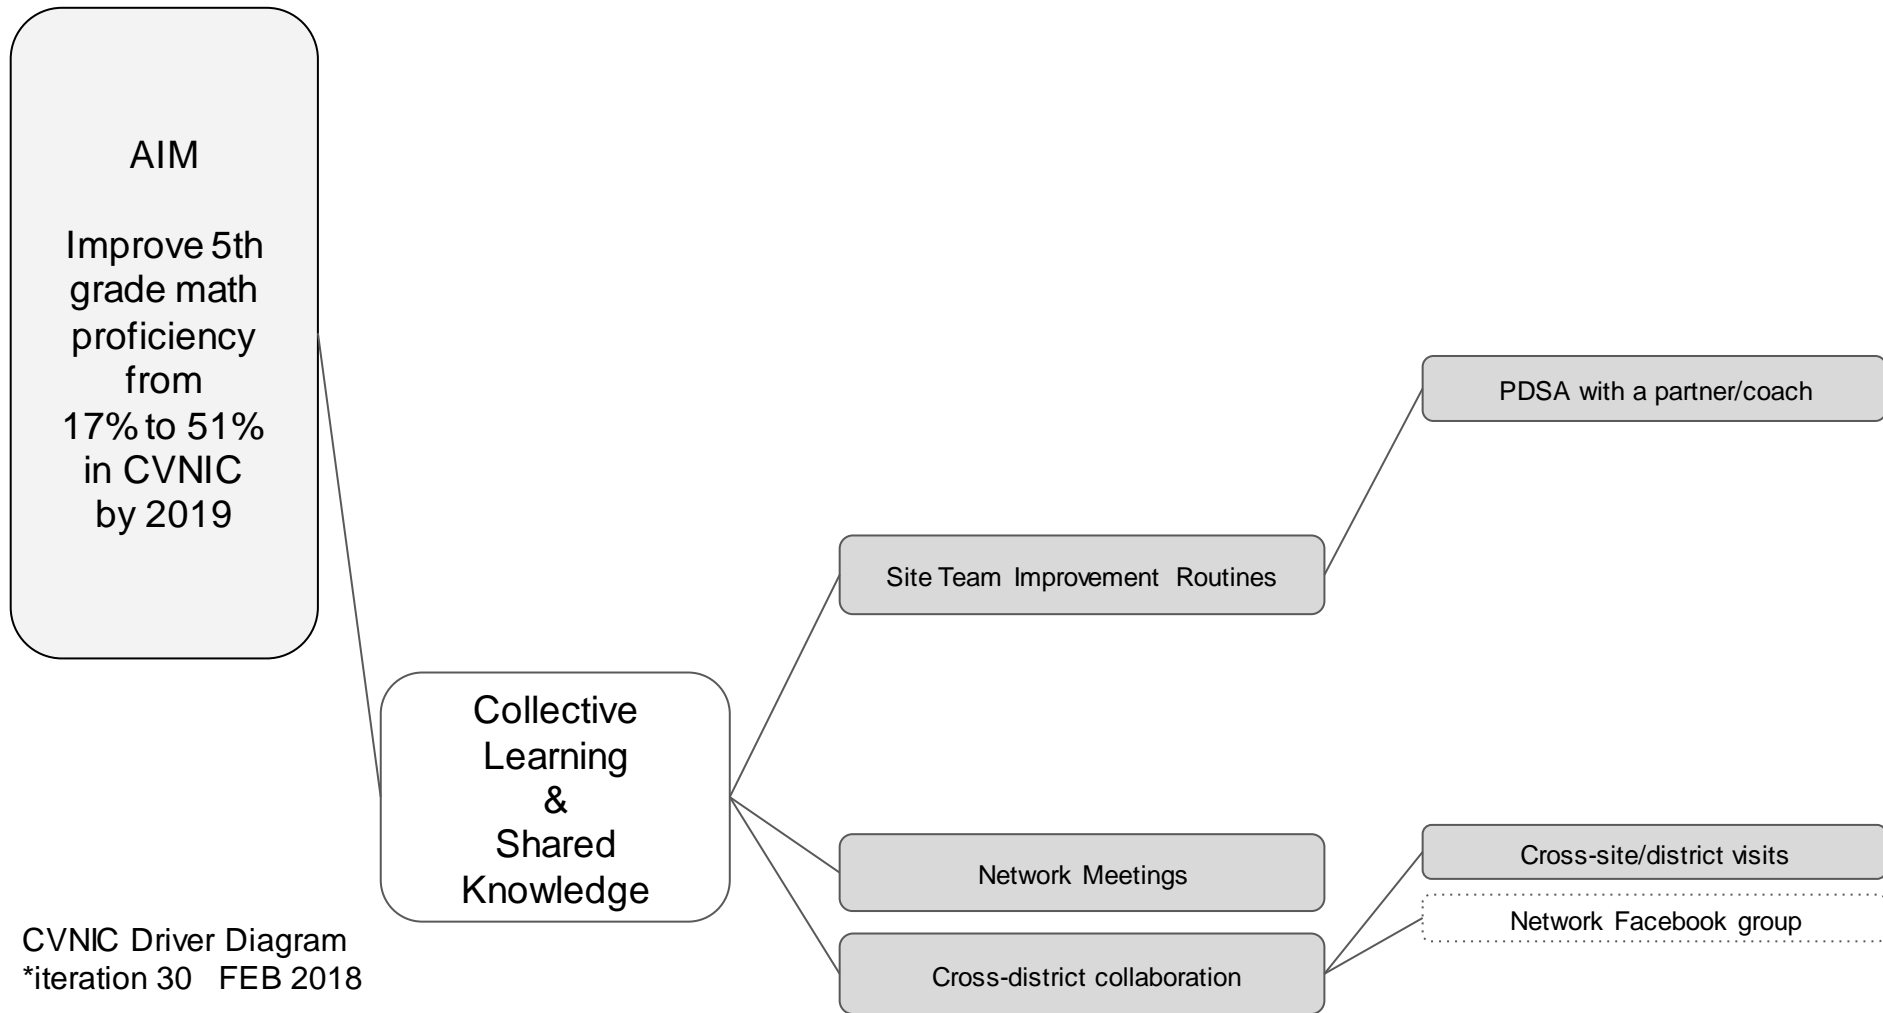

Mathematics Instruction:
sense-making
productive struggle

Aligning Supports for Instructional Improvement

Collective Learning & Shared Knowledge

- Launching the Math Year
- Beliefs about Mathematics Learning
- Cooperative Learning
- Mathematical Tasks
- Whole Class Debrief
- Formative Assessment
- Teacher Access to Personalized Coaching
- Planning Process
- Lesson Observation with Debrief
- Site Team Improvement Routines
- School Culture of Teaching & Learning
- Professional Learning
- Network Meetings
- Cross-district collaboration

- Classroom Norms + iMath Curriculum
- Exit Slips
- Rich Task Teaching Routine
- Student groups and work space
- Tools for Opening Tasks
- Problem Solving Package
- Student Question Stems
- Analysis of student work
- Hub Site visit
- Consolidation Meetings
- PDSA with a partner/coach
- Lesson Study
- Coach/teacher contact process
- Content training from Hub
- External IS support
- Jo Boaler PD
- Adults doing math
- Cross-site/district visits
- Network Facebook group

Initial Social Network Analysis of CVNIC

- Focused on one SNA Question:
 - In the last six months, how often have you had network-related interactions with other network members via email, phone, or face-to-face?
 - No interaction
 - Once or twice
 - Monthly
 - Weekly
 - Daily
- Used UCINET software (Borgatti, Everett, & Freeman, 2002) to look for:
 - Central actors
 - Problematic silos
 - Match between the formal and informal organization

Social Network Map #1: Sizing nodes by degree centrality

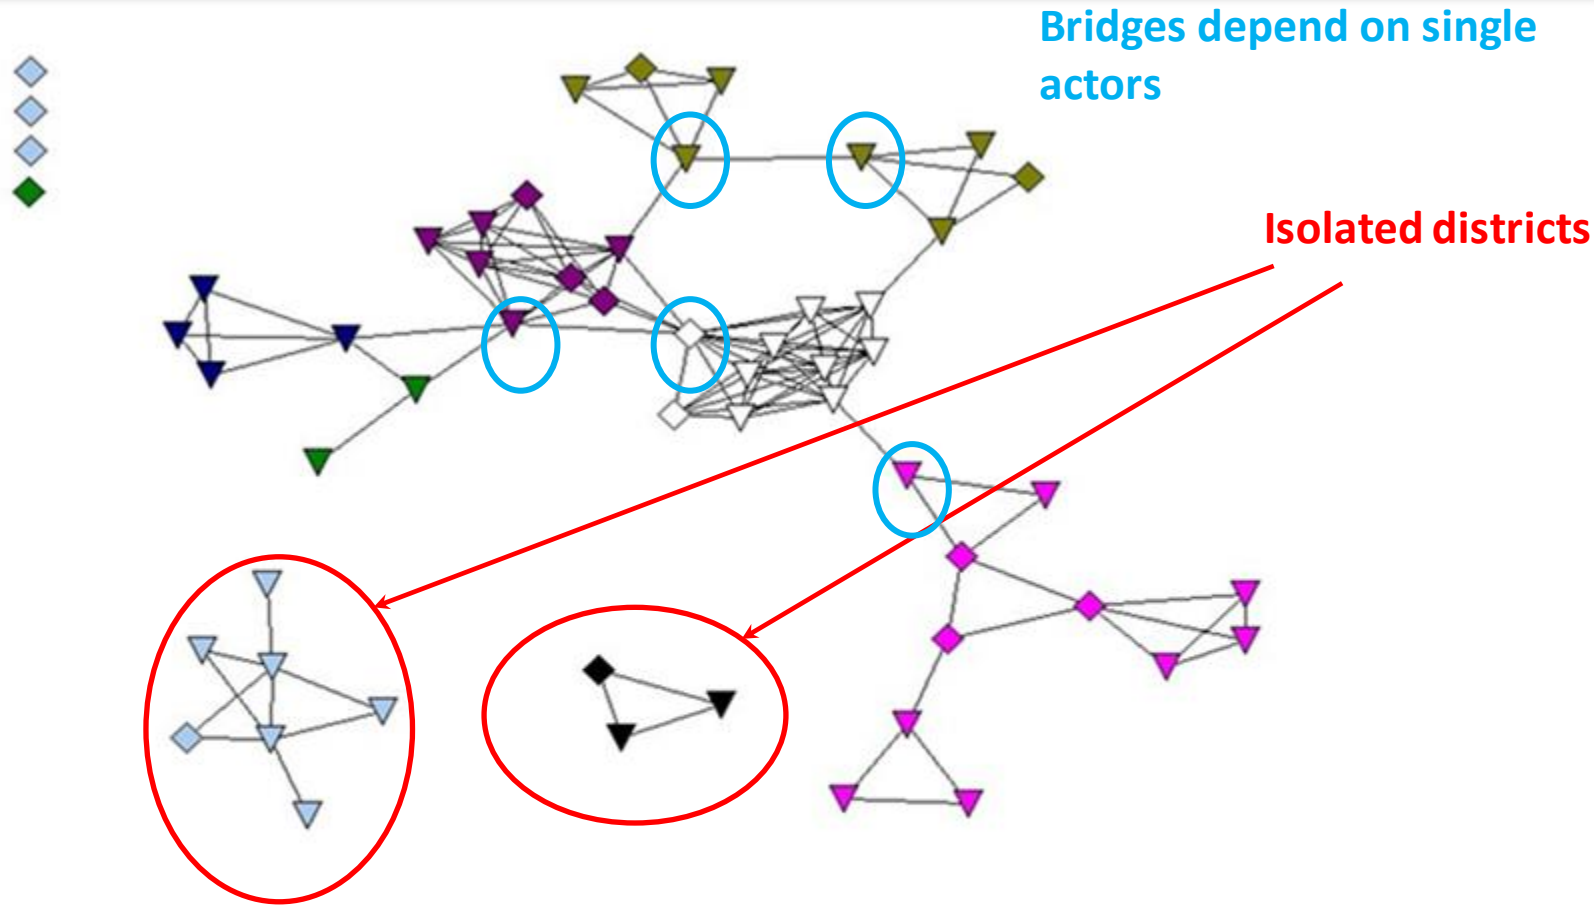

Your Turn!

See Handout

- What do you notice? (5 mins)

Social Network Map #2: Visualizing only school-level staff (principals and teachers)

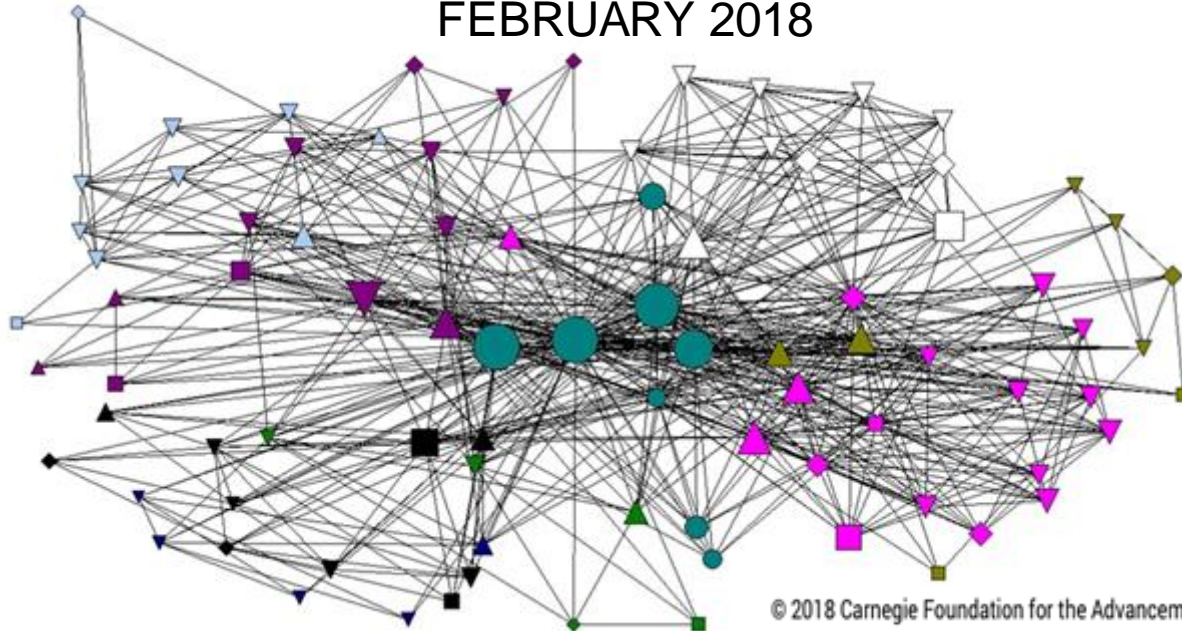

Changes made related to the social network findings

- To build connections within the districts:
 - Network Facebook Group
 - PDSA with site-partners
 - Site visits from the hub/Consolidation of learning
- To build connections across districts:
 - Network Facebook Group
 - Cross District Visits/Collaborative PDSA Testing
 - District Showcase at network meetings

MAY 2017

FEBRUARY 2018

What's next for CVNIC?

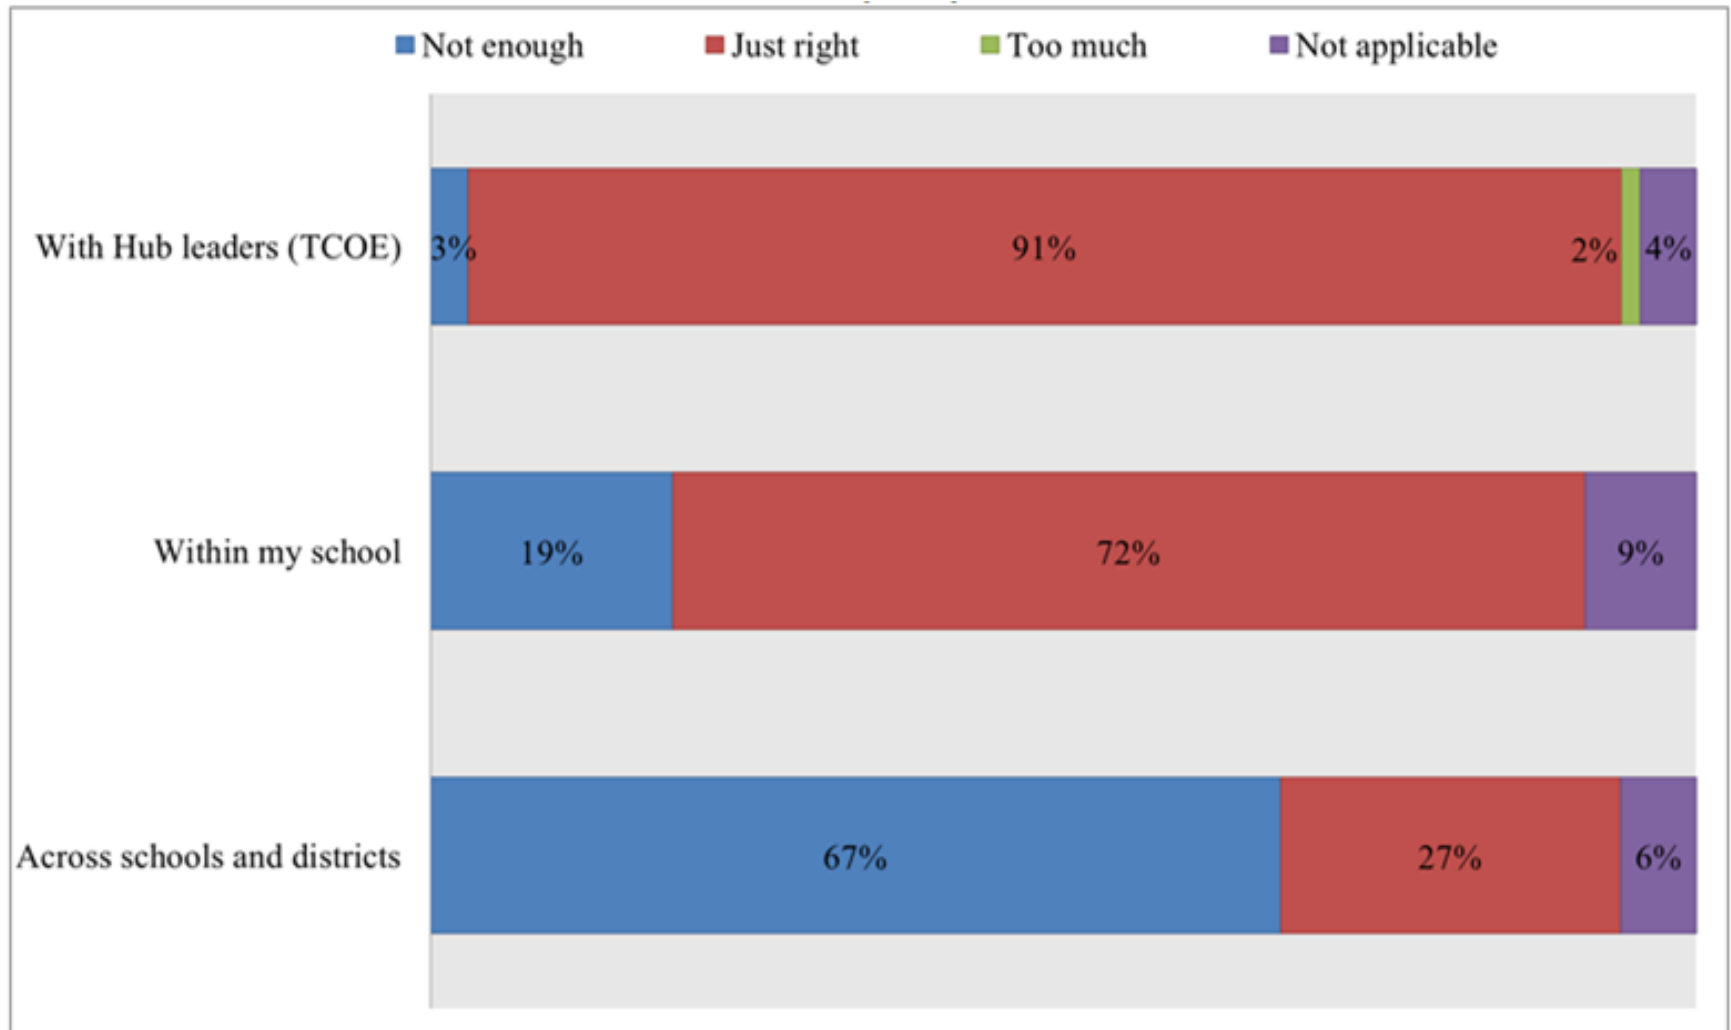

- Continue to test collaboration change ideas for the network.
- Principal connectedness change ideas:
 - principals to join coaches' meetings
 - common problem of practice -“scale”
 - principal cohort meetings

Summary

- SNA can be a useful **practical tool** for educational leaders, especially those who are trying to foster new forms of collaboration.
- CVNIC used SNA to **diagnose** areas in which they wanted to strengthen social connections, **plan** new collaborative structures, and **assess** the effects of their efforts.

Thank you!

Supplemented social network data with additional data: What is your satisfaction with the extent of communication from the following sources? May 2017
